

FLOZA AUTOMATIONS

Project Proposal

Prepared for: [Client Name]

Prepared by: Hassen, Floza Automations

Date: August 03, 2026

Overview

This proposal outlines a custom automation solution built for [Client Name], designed around your specific workflow. The goal is straightforward: remove manual, repetitive work from your process and replace it with a system that handles it automatically, reliably, and with minimal upkeep.

On Pricing

There's no fixed price attached to this project. I'd rather build something genuinely useful and let you decide what it's worth to you once you've seen the results. My goal right now is experience and real-world projects, not maximizing price, so pay what you feel is fair for the value delivered.

Scope of Work

- Requirements review to confirm the exact workflow and pain points
- Design and development of the automation tailored to your process
- Integration with your existing tools or documents where needed
- Testing with real samples to confirm accuracy and reliability
- Handoff with a walkthrough and light documentation

Timeline

Phase	Description	Duration
Discovery	Confirm requirements and scope	Day 1
Build	Development of the automation	Days 2–5
Testing & Handoff	Testing, walkthrough, and handoff	Days 6–7

Estimated total turnaround: 5–7 days from kickoff.

Next Steps

If this sounds useful, reply and let me know more about your current process so the build can be tailored exactly to it. Happy to jump on a quick call first if that's easier — we can get started right away either way.
